                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is a human G-protein coupled receptor (GPCR) used for comparison with the seven transmembrane domain of a novel GPCR designated h15571. h15571 GPCR polynucleotides and polypeptides may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate GPCR expression. Such diseases includes immune, haematological, fibrotic, hepatic and respiratory disorders including asthma, allergies (e.g. allergic rhinitis and psoriasis), pathogenic infections, chronic inflammatory diseases, organ-specific autoimmunity,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human CRF1 seven transmembrane domain.

graft rejection, graft versus host disease, cystic fibrosis and, in particular, liver fibrosis. The GPCR polypeptides may be used as antigens in the production of antibodies against GPCR and in assays to identify modulators (agonists and antagonists) of GPCR expression and activity. The anti-GPCR antibodies and GPCR attagonists may also be used to down regulate GPCR expression and activity. The anti-GPCR antibodies may be used to down regulate GPCR expression and activity. The anti-GPCR antibodies may be used as diagnostic agents for detecting the presence of GPCR polypeptides

```
The invention relates to recombinant mammalian G protein-coupled corticotropin-releasing factor (CRF) receptor (CRF-R) proteins having high affinity for CRF and nucleic acid molecules encoding such receptor proteins. Polypeptides of the invention can be used to reduce high levels of adrenocorticotrophic hormone caused by excess CRF and so can be used to treat diseases such as Cushing's syndrome, pituitary tumours, chronic stress, anorexia nervosa, alcoholism and irritable bowel syndrome. They are used in pharmaceuticals and in the production of antibodies. The present sequence is human CRF-RA2 splice variant protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120

The present invention describes DNA (I) encoding a corticotropin releasing hormone receptor type 1 (CRH-R1) protein comprising an amino acid sequence given in ABR43055 to ABR4301. Also describe: (I) a vector (II) capable of expressing (I) or its degenerate variant, and comprising (I) or its degenerate variant, and regulatory elements necessary for expression of the DNA in a cell; (2) a host cell (III) transfected with (IV) directed against (IV); (5) a host cell (III) transfected with (II); (3) an isolated CRH-R1 protein (IV) encoded by (I); (4) an antibody (V) directed against (IV); (5) a paramaceutical composition (VI) comprising (IV), and a carrier; and (6) protecting (M) skin cells against campage induced by an environmental factor, by inducing the expression of CRH-R type IG in the skin cells, where the expression of the receptor protects the skin cells against the damage. CRH-R1 has antipsoriatic, antiallergic, immunosuppressive, antiinflammatory and dermaclological cativities. (VI) can be used for treating a pathophysiological state such as hyperproliferative epidermal disorder, neuroendocrine disorder, allergic context dermallergic autoimmuntal factor such as solar radiation. Human CRH-R1 call allergic and environmental factor such as solar radiation. Human CRH-R1 is located to chromosome context such as solar radiation. Human CRH-R1 is located to chromosome context in the present sequence represents human CRH-R1 beta (see Genbank context) in the present sequence represents human CRH-R1 beta (see Genbank context) in the context of th

Donaldson CJ,

New nucleic acid and its encoded G protein-coupled corticotropin-releasing factor receptor, useful for diagnosing or treating e.g. ACTH levels or high cortisol levels associated with Alzheimer's disease or Cushing's disease

Disclosure, Col 61-64; 42pp; English.

```
ö
                mammalian G protein-coupled corticotropin-releasing factor (CRF) receptor protein. CRF is a hypothalamic peptide which stimulates the screetion and biosynthesis of pituitary adrenociticotrophic homone (ACTH) leading to increased adrenal glucocorticotrophic homone (ACTH) leading to receptor that it encodes, is useful in bioassays. The nucleic acid or CRF receptor is particularly useful for providing recombinant receptors that allows the development of less expensive, more sensitive and automated means for assaying CRF and CRF-like compounds and developing CRF-based useful in therapy, e.g. gene therapy for reducing ACTH levels or treating high cortisol levels associated with Alzheimer's diseases, Cushing's
                                                                                                                                                                                                                                                                  diseases, anorexia nervosa, alcoholism or irritable bowel syndrome. These tase useful in diagnostic assays, e.g. for diagnosting Alzhaimer's diseases, melancholic depression, anorexia nervosa, Cushing's diseases or alcoholism. The sequence presented is the human splice variant of CRF-R1,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  420

receptor in a suitable host cell, by expressing a recombinant CRF receptor in a suitable host cell, by expressing a recombinant CRF receptor in a suitable host cell, by expressing the vector, where the receptor in a suitable host cell, by expressing the vector, where the nucleic acid encodes CRF-R that binds CRF or nucleic acid degenerate to the naturally occurring nucleic acid. The cell line is useful for expressing hCRF-RAI protein by recombinant techniques and in binding cassays using CRF-R which are used for rapidly screening large number of compounds to determine which compounds are capable of binding to CRF-R, and for identifying new CRF-like ligands. The polypeptides expressed by the call line inhibit CRF-like ligands. The polypeptides expressed by care useful for reducing high ACTH) release in vitro by several cells, and adrenocorticotropin hormone (ACTH) release in vitro by several cells, and case useful for reducing high ACTH levels caused by excess CRF, and can elacted the proteins are also useful for treating cushing's disease, pituitary tumours, Alzheimer's disease, melancholic depression, anorexia nervosa, chronic stress, alcoholism and hypercortisolaemia. The proteins are also useful for treating such as pre-eclampsia, which occur during pregnancy, to reduce pregnancy-induced complications and increased CRF levels which can otherwise result in excessive release of ACTH. The proteins are also useful for locally treating arthritis and other similar aliments, modulating action of CRF in mammals. The CRF-R polypeptides are used in such as as the diagnosis and/or treatment of CRF-dependent tumours, chancing the survival of brain neurons, inducing abortion in livestock and other domesticated animals, inducing twinning in livestock and other homesticated animals, inducing the proteins are applied to the contraction of CRF in mammals, inducing abortion in livestock and other domesticated animals, inducing the proteins are applied to the contraction of the factor of the factor of the factor of the factor 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a cell line expressing a recombinant corticotropin releasing factor receptor (CRF-R) encoded by a nucleic acid expression vector, or a cell line containing a nucleic acid vector encoding a recombinant CRF-R. The vector encodes human CRF-R, subtype A,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GQLVVRPCPAFFYGVRXNTTNNGYRECLANGSWAARVNYSECQEILNEEKKSKVHYHVAV 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention discloses a composition comprising two or more isolated or human polynucleotides or a polynucleotide which represents a fragmen derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent

that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the composition, a method for producing a pharmaceutical composition, a certod for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the compositioation, a method for identifying a compound useful in rreating pain and a pharmaceutical composition compound useful in rreating colypeptides or their antibodies. The polymucleotide or the compound that colypeptides or their antibodies. The polymucleotide or the compound that compliants its activity is useful for preparing a medicament for treating pain and expiral sequence presented is a human protein (shown in Table 2 of the rappy). The sequence presented is a human protein (shown in Table 2 of the sequence data for this patent did not form part of the printed consecution) which is differentially expressed during pain. Note:

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at the way of the printed consecution in the patent did not form part of the printed specification.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         셤
                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated mammalian G protein-coupled corticotropin-releasing factor (CRF) receptor protein or polypeptide from Rat, Mouse or human appearing as AD055801, AD055805, or AD055810, encoded by the nucleic acids appearing as AD058800, AD055802, AD055810, encoded by the nucleic acids appearing as AD058800, AD058802, AD055810, encoded by the nucleic acids appearing as AD058800, AD058802, AD058804, or AD058809. Also included are a composition comprising CRF-R, assaying C for the presence in biological fluids of CRF-R protein, protein analogues and/or fragments, comprising CRF-R) and/or one or more antibodies. The protein, polynucleotide or composition is useful in diagnosing and c treating Alzheimer's disease, melancholic depression, anorexia nervosa, Cushing's disease, hypercortisolaemia or alcoholism, gastrointestinal disorders (e.g. irritable bowel syndrome) or physiological conditions and in modulating blood pressure, thus combat hypotension. The present sequence represents human splice variant CRF-RA2.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             triphosphate-binding protein coupled receptor (GPCR). A polynucleotide of the invention may have a use in gene therapy. The polynucleotide and polypeptide are useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor. The protein sequences shown in ADC85549-ADC87617 represent GPCR's of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            133
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FFYGVRYNTTINNGYRECLANGSWAARVNYSECQEILNBEKKSKVHYHVAVIINYLGHCIS 130
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New polynucleotide, useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             70

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Isolated corticotropin releasing factor receptor and nucleic acid - also antibodies, useful for diagnosis and treatment of Cushing's disease, pituitary tumours etc., also to identify specific agonists and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                             This protein can be used to determine CRF (e.g. over- or under-
production, high levels of CRF late in pregancy may indicate trisk of
premature labor). Cells expressing the protein are used to identify e.g.
antibodies, which can be used to modulate signal transduction activity
mediated by CRF receptors. Typical applications are in the treatment of
Cushing's disease, pituitary tumors, etc. (Updated on 25-MAR-2003 to
correct PN field.)

A new G-protein-coupled receptor protein, CRF-R1 (AAR97290), has high binding affinity for corticotropin releasing factor (CRF). The amino acid agequence was deduced from a cDNA clone (AAR28968) isolated from human pituitary corticotrope adenoma (Cushing's tumour). This cDNA can be used for prodn. of recombinant CRF-R1. A splice variant contg. a 29-amino acid insert (AAR97291) was also identified. The receptor can be used to identify agonists and antagonists that modulate the signal transduction activity mediated by CRF receptors. The receptor can be administered therapeutically to reduce high ACTH levels caused by excess CRF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Isolated corticotropin-releasing factor receptor (CRF-R) - used to develop prods. for modulating signal transduction activity mediated by
Corticotropin releasing factor receptor; CRF-R; corticoliberin; signal transduction.

This sequence represents human corticotropin releasing factor (CRF) receptor protein. The cDNA fragment is derived from the expression vector designated pACO2. pACO2 is an expression vector constructed for elevated expression of the human receptor protein. The recembinantly produced CRF receptor protein or a peptide fragment, may be used for efficient and rapid screening of an agonist or antagonist of human CRF receptor.

The invention relates to recombinant mammalian G protein-coupled corticotropin-releasing factor (CRF) receptor (CRF-R) proteins having high affinity for CRF and nucleic acid molecules encoding such receptor proteins. Polypeptides of the invention can be used to reduce high levels of adrenocorticotrophic hormone caused by excess CRF and so can be used to treat diseases such as Cushing's syndrome, pituitary tumours, chronic stress, anorexia nervosa, alcoholism and irritable bowel syndrome. They are used in pharmaceuticals and in the production of antibodies. The present sequence is human CRF-RAI protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120

```
The present invention relates to a method of identifying candidate compounds for regulating skeletal muscle mass or function, and comprises contacting a test compound with a corticotropin releasing factor-2 receptor (CRP2R) or with a cell expressing a functional CRP2R, the CRP2R and identifying the test compound binds to, or activates, the CRP2R as candidate compounds for regulating skeletal muscle mass or function. The method is useful for preparing a medicament for treating skeletal muscle atrophy or for prophylactic treatment of muscular dystrophies. The present sequence is a corticotrophin releasing factor receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       IINYLCHCISLVALLVAFVLFIRIRPGCTHWGDQADGALEVGAPWSGAPFQVRRSIRCLR 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ï
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a method of identifying candidate compounds for regulating skeletal muscle mass or function, and comprises contacting a test compound with a corticotropin releasing factor-2 receptor (CRF2R) or with a cell expressing a functional CRF2R, determining whether the test compound binds to, or activates, the CRF2R and identifying the test compounds that bind to, or activates, the CRF2R as candidate compounds for regulating skeletal muscle mass or function. The method is useful for preparing a medicament for treating skeletal muscle atrophy or for prophilactic treatment of muscular dystrophies. The present sequence is a corticotrophin releasing factor receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        121 IINYLGHCISLVALLVAFVLFLRLRPGCTHWGDQADGALEVGAPWSGAPFQVRRSIRCLR 180

The invention relates to a Schizosaccharomyces pombe yeast cell (I) comprising: (a) a heterologous G-Protein Coupled Receptor (GPCR) - regulated signaling pathway (PI) which is derepressed during mitotic phase of cell growth; and (b) a reporter system (RS) for reporting signal mediated by PI, which is regulated by EQCK, and GI and PR is promoter (PR), which is regulated by GPCK, and GI and PR is heterologous. Also described is (I) an isolated polynucleotide (IIa) comprising an sxa2 promoter, or its homologue or analogue, operatively linked to an exogenous reporter gene; (2) an isolated polynucleotide (IIb) encoding a Galpha-transplant having a nucleotide sequence from Galphaq, Galphae, Galphai2, Galphai3, Galphaz, Galphai2,
                                                                                                                                                                                                               New Schizosaccharomyces pombe cell, useful for studying G-protein coupled receptor-regulated signaling pathway that is derepressed during cell growth mitotic phase and

Galphal3, Galphal4 and Galphal6. (I), (IIa) or (IIb) is useful for studying GPCR-regulated activity, for determining the effect of a compound on GPCR-regulated activity by introducing the compound, to (I) and noting the output of RS, where the compound affects the ability of orphan GPCR to regulate RS. Furthermore (I) is useful for identifying a reagent that modilates GPCR-regulated pathway and for identifying a reagent that modilates GPCR-regulated signaling pathways, by producing a random peptide within (I) and measuring an amount of reporter activity produced. ABRS5570-ABRS95608 represent Galphatransplant amino acid sequences and related amino acid sequences of the
